Electrical Hazard ID Program

This program will help your employees and customers identify hazardous conditions within typical utility electric systems and help identify what actions to take keep yourself and others safe.

The Hazard ID program is a Macromedia Flash-based CD for use on PCs running Windows 98 and higher. This presentation gives an overview of powerline-related hazards commonly occurring in residential areas and how to properly recognize these problems.

This business-to-consumer CD is intended to be sent to clients of a power utility company in order to increase the awareness of such potential dangers. It is through such awareness that greater efficiency and a higher safety level is achieved.

There are three models of customization for your utility Hazard ID CDs.

Electrical Hazard Identification Screenshots:

These levels are:

Basic:

The client is purchasing the Hazard ID CD with no customization. All the material will be intact in this version, but there will be no reference to your company.

- Investment: $995

*includes 10 master copies
Additional copies $50 each

Branded:

This model will have a maximum of two two-minute video clips for the introduction and conclusion. Video clips will be provided by your company or quoted separately by TMC. This model has a branded interface and presentation. This will feature your company's logo prominently displayed throughout the presentation.
